

Making Edge Work for your NHS Trust

Natassia Garton Research & Development Department

Aim:

Making Edge Work for your NHS Trust from a beginners perspective, how to make the most from one system.

Objectives:

- Implementation of Edge for the Research and Development Department (R&D)
- Data Cleansing
- Linking Clinical and Non Clinical
- Recruitment and Metrics

Method:

Initially two teams were chosen to pilot using Edge. Training was then rolled out to all teams by speciality. This enabled all teams to have a set launch date to begin using Edge. Following a 6 month implementation system recruitment reports were sent to all teams on a monthly basis. Data cleansing was performed on a daily basis to ensure all information was up to date on the system and was then moved to a monthly basis.

Information at the touch of our fingertips

Summary:

In 2015 University Hospitals Coventry and Warwickshire NHS Trust were introduced to EDGE as our Local Portfolio Management System. Since then processes have been streamlined incorporating Edge as part of the R&D's standard practice. Information is now at the touch of our fingers with the support of an easy to use system. By collecting and sharing data we are able to report on metrics and for the first time have real time accurate data.

Conclusion:

- Data Compliance from 48% to 96% (within 2 months)
- Stronger Communication between Clinical and Non Clinical Teams.
- Sharing of data information and metric compliance
- Ease for reporting for National and Trust Level Data
- Taking the next steps to expand and evolve our use of Edge.

Take Home Message:

Breaking down barriers, learning from others, sharing knowledge being transparent and learning from best practice.
